SUMMARY

AI and full-stack engineer who builds and deploys complete products independently: RAG with measured answer quality, multi-agent LangGraph workflows with human escalation, and React/FastAPI apps running live. Hands-on LLM evaluation experience from Ethara AI. Comfortable owning a feature from idea to deployment, remotely and in small teams. Immediate joiner.

CORE SKILLS

AI / LLM: RAG (hybrid BM25 + vector search, reranking), multi-agent workflows (LangGraph), MCP, LLM evaluation (Ragas, RLHF), observability (Langfuse), Qdrant, Groq, Cohere
Backend: Python, FastAPI, Node.js, Express.js, REST APIs, WebSockets, PostgreSQL, MongoDB, SQL, Supabase Auth
Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML, CSS, Recharts, Responsive Design
Tooling & Delivery: Git, GitHub Actions, CI/CD, Docker, Vercel, Render, Linux, n8n, Make.com, Vapi, Unit & Regression Testing

PROJECTS

- Groundwork – Full-Stack RAG Application** | *React, FastAPI, Qdrant, Cohere, Groq, Langfuse, Ragas*[Live Demo](#) | [GitHub](#)
- Built and deployed a RAG app that answers questions from uploaded documents with citations: hybrid BM25 + vector retrieval with Reciprocal Rank Fusion, Cohere v3.5 reranking, and parent-child chunking.
 - Measured quality with Ragas (**1.00 faithfulness, 0.71 answer relevancy**) and traced the full pipeline in Langfuse.
 - Diagnosed the index being wiped on each redeploy (free-tier storage limits) and migrated vector storage from local ChromaDB to Qdrant Cloud, so the index now persists.
- AI CodeReview Pro – Multi-Agent PR Review Platform** | *LangGraph, FastAPI, React, Qdrant, Supabase, Recharts*[Live Demo](#)
- Built a LangGraph pipeline that triages pull requests, writes RAG-grounded review comments, and escalates high-risk changes (auth, payments, migrations) to a human reviewer.
 - Built the React dashboard with Supabase auth (Google, GitHub, email) and a Recharts observability view tracking agent runs, escalation rate, and review breakdown by risk level.
- NotesToReport – Citation-Grounded Report Tool (Open Source)** | *Python, FastAPI, LangGraph, MCP*[GitHub](#)
- Built an MCP developer tool that turns raw notes into a cited report: it extracts claims, checks each against the source notes (entailment), and blocks the hand-off if the faithfulness score is below **0.85**.
 - Wrote adversarial unit tests confirming that hallucinated claims are rejected.

EXPERIENCE

- Founder & Independent Software Engineer** Jun. 2025 – Present
RoofersSync / LeadAI (self-directed) Remote
- Built an AI lead follow-up system: an agent writes and sends a personalized reply to each new lead and logs it to Google Sheets (n8n, Groq, Gemini, Gmail), plus a voice-agent version that qualifies inbound calls and books inspections (Vapi, Make.com, Cal.com).
 - Shipped the live product site and demo, and ran outbound outreach to 50+ prospects to test the offer.
- LLM Post-Training Engineer** Mar. 2026 – May 2026
Ethara AI Gurugram, Haryana, India (Remote)
- Evaluated and ranked 50+ AI model responses daily for RLHF data collection, documenting recurring failure modes while working in a large remote team.
- Software Engineer Intern** Aug. 2024 – Oct. 2024
OctaNet Services Pvt Ltd. Bhubaneswar, Odisha, India (Remote)
- Automated recurring regression checks with Python and PowerShell scripts, cutting manual test-cycle time before releases; logged and tracked defects while working fully remotely.

EDUCATION

- Yashoda Technical Campus** Satara, Maharashtra, India
B.Tech, Computer Science & Engineering (DBATU) Aug. 2021 – Jun. 2025
